

Canada's Weather Video - Grade 7

Instructions for the Teacher

- 1) Teach Weather Vocabulary to students.
- 2) Watch "Canada's Weather" Video Together as a class. It can be re-watched as many times as needed. A video script has also been provided to help the teacher or students in the viewing of the video.
- 3) Pass out "Canada's Weather Comparison Charts" to students and give them time to write some questions comparing the weather forecast in the four different Canadian cities. Have them write their questions on strips of paper to be drawn later.
- 4) Have students work with a partner. They will take turns drawing a question, with they will pose to their partner. The partner will answer the question, and then they will reverse roles until they have answered all of their questions.
